

Competitive Landscape

Every competitor identified during Module 2 research, organised by tier. Companion to the Airbnb Experiences battlecard. Segment under test: friend groups on milestone trips, organised by an existing Roamly user.

HOW THE TIERS WORK

Tier	Definition	Core action
Primary	Evaluated alongside you right now, in live decisions with real budget.	Build battlecards. Prepare sharp answers.
Secondary	Solve part of the same problem but are not yet consistent in your deals.	Monitor positioning. Track overlap before it becomes a problem.
Aspirational	At a scale or in a segment you are not competing in yet, but will be.	Track early, before they define the category narrative your future buyers learn from.

The structural finding that shapes the whole map. The market is split in half. Everyone with supply has no coordination. Everyone with coordination has no supply. Roamly is the only player positioned to hold both, because it already owns the vetted host network and the organiser relationship. That gap, not the split-payment feature, is the wedge.

TIER 1 · PRIMARY

One competitor. Full battlecard is a separate document.

Airbnb Experiences · primary

Dimension	Detail
Who they serve	Travellers already inside the Airbnb ecosystem, booking around an accommodation decision.
Position	Authentic, host-led, local. The experience as an extension of where you are staying. The same axis Roamly built its reputation on.
Where they win	Distribution adjacency. Experiences surface at the moment someone books a stay, while Roamly must be sought out.
Where they are exposed	Split payments launched globally in 2017 and were retired in mid-September 2018 as a failed experiment. No native option since. No participant identity in a group booking, so no acquisition loop.
Economics	Experiences reportedly run a separate 20% host fee against 15.5% for most stay hosts. Airbnb has consolidated to a flat host-side fee, so guests now see one all-in price.
Why primary	The only competitor holding both halves of the structural gap: curated supply and prior experience of the coordination mechanic.

TIER 2 · SECONDARY · COORDINATION WITHOUT SUPPLY

These reach the organiser *before* any booking platform does, at the moment the trip is still an idea. None of them hold inventory. The category is fragmented: planners do not split money, splitters do not plan, and a wave of all-in-ones is trying to close that gap.

Product	What it does	Relevance to Roamly Groups
Takeoff	iPhone-only, free. Create a trip, invite friends, build the itinerary and split payments in one app. Pitches avoiding fronting costs to reserve experiences.	The closest product match to Roamly Groups and the sharpest secondary threat. Small and platform-limited today. Promote to primary if it gains inventory partnerships.
AvoSquado	Free, no paid tier. Group commitment, shared accommodation with bedroom assignments, activity voting and booking, expense splitting.	All-in-one coordination aimed at exactly the friend-group segment. Watch whether "activity booking" becomes real inventory.

Product	What it does	Relevance to Roamly Groups
TripProf	Per-trip credit rather than subscription. Shared planning, map, multi-currency expense splitting, receipt and booking-PDF extraction.	Signals where the category is heading: extraction and per-trip pricing. Relevant to Module 5 pricing thinking.
Troupe	Polling to decide destination and dates, in one dedicated group chat. Free, with premium polling.	Owens the earliest moment of intent, then stops. Its job is done once the group picks where and when, with no itinerary or expense tracking.
Wanderlog	Map-based collaborative itinerary building. Free, with Pro at \$39.99/yr for offline maps and AI assistant.	Planning canvas with no money layer. Users add Splitwise alongside it.
Splitwise	The default expense splitter. Free tier now caps daily expense entries and runs ads; receipt scanning is in Pro.	Not a planner and does not want to be. It is one half of the status quo stack, and its tightening free tier is an opening.
Triplt	Forward confirmations, get a shared itinerary. Pro at \$48.99/yr.	Organiser-side, solo and business skew. Least overlap with the friend-group occasion.

Why these stay secondary, for now. Your organiser is not weighing Roamly against Takeoff. They are using WhatsApp and Splitwise and then booking somewhere. These products are upstream, not alongside. That changes the moment one of them adds bookable inventory.

TIER 2 · SECONDARY · SUPPLY WITHOUT COORDINATION

These compete with Roamly the business on inventory and search. They are not competing for your segment on coordination, which is why they are secondary rather than primary for this launch.

Product	Scale and position	Group handling, and the gap
GetYourGuide	German, founded 2009. Curated experiences with verified local guides. Leads Europe and Australia.	Has per-group pricing, but as a supply-side construct: the customer pays one price for the whole group and a single ticket is issued, reducing timeslot capacity by one regardless of party size. One payer, one voucher, no participant identity.
Viator	Owned by Tripadvisor since 2014. 300,000+ experiences across 190+ countries. The global breadth leader.	Breadth strategy. Same single-payer checkout. Competes on inventory volume and search, not on the group job.

TIER 3 · ASPIRATIONAL

Not competing with Roamly Groups today. Each is either at a scale Roamly is not, or in a segment Roamly will enter, and each is shaping what future buyers expect. Track early, act later.

Who	Why they matter later	Watch signal
Klook	Hong Kong, founded 2014. The Asia-Pacific specialist, and dominant where Roamly's four-continent host network would expand next. In Japan, 42.1% of international tourists used Klook for paid tours and activities, roughly triple the next platform.	Any move into group coordination or social booking in APAC. They would define the category narrative in a region before Roamly arrives.
Tickets	Founded 2014. 3,000+ attractions in 50+ countries. Mobile-first instant ticketing.	Sets the expectation for frictionless ticketing. Relevant to how low Roamly's join flow friction has to be.
Headout	30M+ guests across 81 destinations, expert-led tours, with documented customer service and cancellation friction.	A cautionary case on scaling curated supply. Their friction is Roamly's differentiation argument.
Revolut and consumer fintech	Group vaults let a group pool money upfront and draw from a shared balance, with built-in currency exchange.	The most under-watched threat on this page. If pooled group money becomes a banking feature, the coordination advantage erodes from a direction travel does not monitor.

THE REAL INCUMBENT · THE STATUS QUO

The module's own framing is that the biggest competitor is usually no decision. Here it has a name and it is winning on Roamly's own platform right now.

- **The stack:** a WhatsApp group, a shared spreadsheet, and Splitwise or Venmo.
- **Why it wins:** free, already installed, socially familiar, requires nobody to adopt anything, and it is what Roamly's users are using today to force group bookings through a product not built for them.
- **What it costs them:** Airbnb's own survey found 38% of group travellers had not received all the money owed, and 43% of those had lost \$1,000 or more.
- **Where it breaks:** not the arithmetic. The booking confirms before the money is collected, and the organiser personally carries that gap with their own friends.

WHAT TO MONITOR, AND HOW OFTEN

Tier	Track	Cadence
Primary	Any return of split payments or group coordination to Airbnb Experiences. Changes to Experiences fee structure. The 2025 relaunch roadmap.	Monthly
Secondary, coordination	Whether Takeoff or AvoSquado add bookable inventory or a supply partnership. Splitwise free-tier changes.	Monthly
Secondary, supply	Whether GetYourGuide or Viator move group from a pricing construct to a coordination product.	Quarterly
Aspirational	Klook entering group coordination. Fintech group-money features expanding into booking.	Quarterly
Status quo	Support tickets and session data showing workarounds. The most direct measure of whether Roamly is winning.	Continuous

SOURCES AND CONFIDENCE

Read this before quoting any figure above.

Confidence	Applies to
Well sourced	Airbnb split payments launched 2017 and retired mid-September 2018, and no native option since. Airbnb's consolidation to a flat 15.5% host-side fee. GetYourGuide per-group pricing mechanics, from their own supply documentation.
Company-published, dated	Airbnb's 30% of group reservations converting to new users, and the 38% / 43% unpaid-money survey. Both Airbnb-commissioned, c. 2017. Directional only.
Single third-party source	The 20% Airbnb Experiences host fee. Klook's 42.1% Japan share, from the Kansai Airport Exit Survey 2025 as reported. Product feature and pricing details for the coordination apps, taken from 2026 comparison articles rather than the vendors.
Unverified, treat with caution	Reported review-score averages for Klook and Viator, since the same source notes AI-generated fake reviews are a 2026 problem. Conflicting inventory figures for Klook, reported in one place as roughly 9,000 curated APAC activities and elsewhere as 400,000+ activities across 2,500 destinations. Do not cite a Klook inventory number without checking.
My inference, not sourced	That Airbnb discovery is destination-led rather than occasion-led. That coordination apps are upstream rather than alongside. Tier assignments throughout.

Compiled for Valeria Quintini, VQ Coaching. Supporting research for the Product School Go-to-Market certification, Module 2. Roamly is a fictional scenario; all named competitors are real companies and the analysis of them is drawn from public sources.
